

SERIOUSLY.

BY 2050 A SIMPLE PAPER ~~CUT~~ COULD BECOME DEADLY.

In the future, if a cut becomes infected, antibiotics might not help. If you take antibiotics when you don't need to, or don't complete your course, bacteria become resistant and antibiotics may not work. Illnesses we think are trivial today could be fatal by 2050.

How resistant are you?

Careful! Watch you don't get a papercut...
